PROJECTS

Inventory query on UDP *Java*

<https://github.com/babylonianLion/Inventory-query-on-UDP>

Created a UDP server and client that interact with each other through query requests

LSB steganography *Matlab*

<https://github.com/babylonianLion/LSB-steganography->

Coded a matlab program that's supposed to be a game in which a secret code is hidden in an image and the end-user must decrypt the image

Simplified SMTP on TCP *Java*

<https://github.com/babylonianLion/Simplified-SMTP-on-TCP>

Developed a SMTP client program and a SMTP server program that implement a simplified SMTP protocol based on TCP service

Red vs Blue *Python, Flask, MySQL, jQuery, HTML, JavaScript, AWS Elastic Beanstalk, AWS RDS, CSS*

<https://github.com/Red-vs-Blue/RvB>

Deployed a reddit like web application that revolves around politics where users can create accounts, make posts, make comments, upvotes/downvotes and etc.

AWARDS

The most creative project

Ishik Boys College Erbil Hackathon

Recognized for my remote controlled arduino powered quadruped robot

Sep 2013

Volunteer Participation

ICRC - International Committee of the Red Cross

Recognized for my volunteering participation during the ISIS resurgence

Aug 2014
